WORLD 

## AT&T Workforce Manager for Vehicles

For many businesses, their vehicles are their lifeline. Vehicles are needed to transport employees, products and carry out a host of other functions critical to turning profits every day. We use sophisticated tracking technology to help business owners ensure their vehicles are used the proper way.

Our intuitive software allows users to track vehicles from any web browser. Devices can be installed via direct wiring, or plugged directly into a vehicle's Joint BUS or OBD port.

### Real-world applications

Every industry can benefit from lower fuel costs. Industry averages show that our product can reduce fuel costs by at least 10%. The money saved in fuel expenses is extra money in the budget at the end of the fiscal year that can be allocated for other business initiatives.

Our solution can also impact the safety aspect of fleet tracking. The application can help curb unsafe driving by monitoring occurrences of speeding, aggressive braking, or rapid acceleration. All of these instances can wear down the components of fleet vehicles quicker than usual. Prolonging fleet vehicle life is a major way to save money and protect the employees operating them.

When combining our technology with geo-fence alerts, it becomes possible to confirm time spent on a job site and help combat customer complaints about employees missing deadlines and appointments.

We provide the tools needed to improve near real-time route and decision making, minimize loss and vehicle theft, or to curb unauthorized vehicle usage.

AT&T Workforce Manager for Vehicles provides the tools needed to decrease fuel consumption while monitoring how employees operate them. The best way to change company culture regarding vehicle usage is by removing bad habits before

they become trends. The workforce manager application makes it possible to note and eliminate things like unauthorized “scenic routes” or excessive breaks during work. The platform also provides tools that can potentially reduce downtime and unnecessary wear on fleet vehicles with scheduled maintenance alerts.

## Major Applications

- Accurately report the locations of fleet vehicles or cargo
- Review idle and stop times
- Improve dispatching by assigning jobs based on worker locations
- Help ensure equipment and vehicles are at the proper locations

## Additional Vehicle Events

Customers using OBDII devices in vehicles where the devices are able to establish a connection to the vehicle computer can view events for low battery as well as check engine codes. With check engine events, customers will be able to tell when the check engine light comes on for a vehicle, as well as see exactly which code or codes are coming in. These events allow customers to view the event information in live view, and create alerts to be sent to managers when triggered.

## Benefits

- Provides engine codes and maintenance events to reduce potentially high costs where damage gets worse over time
- The additional information provided by these events make it possible to maintain a “healthier” fleet

## Key features:

- **Alerts** - Send near real-time notifications for aggressive driving alerts, arrival and departure times, geofence breaches, excessive speeding and more!
- **GPS tracking** - Provides extensive visibility into daily vehicle activities. GPS can be used to monitor vehicle location, examine idle or stop times, expedite and streamline dispatching and to reduce vehicle theft.
- **Closest-to** - Enhance customer service, reduce response times, decrease fuel and labor costs by simply selecting a landmark or entering an address to identify the closest workers or vehicles to the desired location.
- **Landmarks (Geofencing)** - Enter, import, or draw custom geo-fences to easily identify your locations, work sites, customers, or other common destinations. Run reports to see how often and how long employees or vehicles spent at a location.
- **Dashboards and Reports** - Visually analyze employee productivity to maximize operational efficiency. Run reports as needed or schedule reports to be automatically emailed. Workforce Manager makes it easy for you to manage location history, audit activity, speeding, stops, time spent with customers and alert history.
